DETAILED ACTION

1. This Office Action is in response to the Election filed October 28, 2004. The Restriction requirement mailed September 28, 2004 has been withdrawn.

Status of Claims

2. Claims 1-19 are pending.

Specification

The disclosure is objected to because of the following informalities: the specification recites: "referring to fig. 1B", in page 7, line 19. It is suggested to replace "1B" by -2B-.

Appropriate correction is required.

The lengthy specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

3. Claims 1-19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Applicant admitted prior art in view of Hatori et al. (U.S. 6,156,433).

Applicant admitted prior art shows providing a glass substrate and forming a transparent conductive film (ITO) (102) on the glass substrate (100) by sputtering (Fig. 1A, page 2). Applicant admitted prior art teaches forming a pi-type bus electrode (104) on the ITO electrode (102) and glass substrate (100) by print method (Fig. 1B, pages 3-4). Applicant admitted prior art discloses the pi-type bus electrode (104) being then formed by lithography method (employing a photoresist layer), the pi-type bus electrode

(104) comprising silver and glass powder and the pi side (106) being formed on the ITO electrode (102) (Fig. 1B, pages 3-4).

Applicant admitted prior art does not specifically show forming the transparent conductive film with a plurality of cavity patterns to expose portion of the glass substrate. However, Hatori et al. shows forming the transparent conductive film (ITO) with a plurality of cavity patterns to expose portion of the glass substrate by applying a photoresist layer and etching the transparent conductive film (Fig. 3A-8B, col. 4, lines 18-29). Hatori et al. shows forming a conductive layer on the transparent conductive electrode (col. 4, lines 29-40).

Therefore, it would have been obvious to a person of ordinary skill in the art at the time of the invention to modify Applicant admitted prior art by including the step of forming the transparent conductive film with a plurality of cavity patterns to expose portion of the glass substrate as taught by Hatori et al. in order to improve the connection (col. 10, lines 10-18).

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Inoue et al. (U.S. 5,252,141) shows several embodiments related to applicant's disclosure.
